

# Practical Spill Management - Train the Trainer

## Introduction

Spill response is essential in ensuring protection of your site and the environment from pollution incidents.

This Practical Spill Management Train the Trainer course is designed in partnership with NPS UK to provide key staff with sufficient knowledge about spill response to carry out in house training.

In house training can be a financially viable option when compared to externally training individual staff, and brings added benefits such as enabling comprehensive training at induction or frequent refresher training and toolbox talks.

## Course Duration

SSG offer this private course in conjunction with NPS UK over half a day.

## Who Should Attend

Any persons with responsibilities for spill management, who wish to develop their knowledge of communication skills and instructional methods to enable them to pass on this information. Before attendance delegates must have attended a NPS UK Practical Spill Management course.

## Course Programme

- Spill Management - teaching others
- Basic Principles of teaching and learning
- Course members will present a short training session on the subject of Spill Management
- Feedback will be given to all delegates on the workshops and the tutor will answer any final questions

## Certification and Assessment

Delegates will be assessed on their input during the practical exercises and a summative assessment at the end of the course. Successful delegates will be awarded a certificate, which is valid for three years.
